The wardrobe plan: clothes for the people

What it costs and how it works, 2026-11-12.

The MetaHuman kit on the PC has one outfit (a grey tee and shorts), so every garment is made by us in Blender, fitted to the MetaHuman body, textured, and saved as a wardrobe item. Putting a garment on a person is the 3-minute local re-fit (no cloud, nothing of the person's face or skin is redone). Prints and colours on a garment are pictures only: 10-20 minutes each, no new garment. Everything is done in 2-3 hour sessions.

A. Uniforms for the roles you can hire (what they wear in real life)

Role	Garments (as real airports dress them)	Hours to make
Pilots (captain, first officer)	white shirt with epaulettes and wings, tie, black trousers, blazer, cap	5
Cabin crew	blazer, blouse or shirt, trousers and skirt, scarf or tie, name badge	6
Ground crew, baggage handlers	hi-vis vest and jacket, polo, work trousers, winter softshell, ear defenders	5
Mechanics, engineers	coveralls with hi-vis strips, work boots, cap	3
Catering	polo or jacket, trousers, hi-vis vest (reuses ground crew cuts)	2
Security	light shirt, dark trousers, epaulettes marked SECURITY, belt, hi-vis for airside	4
Police	dark uniform shirt, trousers, duty belt with cuffs and radio, cap, hi-vis jacket	5
Fire crew, station wear	navy polo or tee, cargo trousers, boots	3
Fire crew, turnout gear (for calls)	bunker jacket and trousers, helmet, gloves	5
Air traffic controllers	shirt or polo, trousers, lanyard (reuses cuts)	1.5
Customs	uniform shirt, trousers, cap (reuses the security cut)	2
Teachers, managers, dispatchers	office clothes: shirt, jacket, trousers, blouse and skirt	4
Cleaners	tunic or polo, trousers, hi-vis vest (reuses cuts)	2
You, the CEO	two suits (slim and classic), shirts, ties, good shoes, a smart-casual set, a coat	8
Uniforms in all		about 55 h

B. Passengers (no children)

Group	Garments	Hours
Everyday, mild weather	hoodie, sweater, long-sleeve, jeans, chinos, sneakers, boots	8
Going somewhere warm	tee, thin jacket, shorts, summer dress, sandals, sunhat	8
Coming from or going somewhere cold	winter coat, parka, hat, scarf, gloves, winter boots	8
Teenagers	hoodie, skinny jeans, sneakers, cropped jacket, cap	6
A few provocative outfits	short skirt, crop top, tight dress, heels	4
Business travellers	reuses the CEO's suit cuts in plainer colours	3
Passengers in all		about 37 h

Loose and tight cuts are different garments (a loose tee and a fitted tee); the list

above has both where it matters.

B2. Accessories and shoes (owner, 2026-11-12)

Accessories are wardrobe items like hair: made once, put on a person at the 3-minute re-fit, no extra build. Each is a small model (0.5-1 h) with its fabric or material from the library.

Group	Items	Hours
Sunglasses	aviator, wayfarer-style, round, sport wrap	3
Caps and hats	baseball cap, beanie, bucket hat, flat cap, wide-brim sunhat, wool hat with bobble	5
Ties	plain tie, striped tie, knitted tie, bow tie (black, patterned)	2.5
Shoes	sneakers (two cuts), leather shoes, boots, winter boots, sandals, heels, work boots, pilots' and crew's dress shoes	8
Accessories in all		about 18 h

Not done: changing clothes between outside and inside (a coat taken off indoors). People wear one outfit; those dressed for the cold keep it on in the terminal, as many real passengers do.

Breath in the cold (not clothing, a game effect, on the list): outside the terminal every person's breath shows as a small puff of vapour with each breath when the air is cold, the player's too; never indoors. About 2 h.

C. Prints and colours (variety for almost nothing)

A sports car on a tee, a Hawaiian print, stripes, a jeans wash, a jacket colour: 10-20 minutes each, drawn by us (no real brands or logos). 50 variants at launch: about 12 h. More can be added at any time.

D. Your wardrobe (changing clothes in the game)

Yes, possible: your own character is built in each of your outfits once (3 minutes each), and a wardrobe in your office (or your home later) swaps between them on the spot, E / X to use. About 4 h for the wardrobe itself. New outfits later: one 3-minute build each.

The wardrobe's menu (owner, 2026-11-12): E at the wardrobe swings the doors open and a menu in the title screen's own style comes up (the glass look, the same graphics as browsing your badges and trophies), browsed by category: suits, shirts, trousers, shoes, hats, sunglasses, ties and so on. Every category is always shown; one you own nothing in reads "empty". While the menu is open the 3D view behind it goes into a portrait-mode blur. The first version is a plain list; the styled one comes with the settings-menu work, which shares its style.

The changing-room camera (owner, 2026-11-12, as in big open-world games): when you open the wardrobe the camera glides in towards you; you stay where you stand, but the view is framed so your MetaHuman stands far over on the right of the screen, big, with the menu beside you on the left, not full screen but in the badges-and-trophies style. The background goes into the portrait-mode blur; you, the one being dressed, stay sharp in front of it. The camera follows what you are changing: your whole body (close, filling more of the screen than now, still leaving room for the menu) for outfits; your face when it is sunglasses, caps or hats; your feet for shoes. While you browse, your character cycles through confident poses instead of standing still: arms crossed, a hand to the chin with the other arm underneath, weight on one leg, and a few more, so it feels alive.

E. Clothes that glitch (the body poking through)

How it is prevented: at the re-fit the garment is resized to that person's body, and the skin under the garment is hidden, so a covered body part cannot poke

through. Problems show at the edges (cuffs, collars, hems) and in extreme poses (sitting, crouching, a sprint). Fixing a garment: 30-60 minutes on the garment itself, then the 3-minute re-fit for the people wearing it. A test scene that runs every garment through walk, sit and run and takes pictures: about 1 h per batch of garments, done as each batch is made. Budget at launch: about 8 h of fit testing.

F. Adding a complete new set after launch

One garment: 1.5-2 h plus its prints. A full set (jacket, shirt, trousers, shoes): about 6 h. Dressing the people who get it: 3 minutes each, unattended. It ships as a small content-pack update, not a full new game download.

H. Quality: the clothes must look real (owner's rule, 2026-11-12)

Every garment is made to a quality bar, whatever its category: - The fabric itself: each material the garment is made of looks like the real thing: cotton jersey, denim, wool suiting, nylon shell, hi-vis polyester, fleece, knit, leather, each with its own weave or grain drawn sharp, its own shine and roughness (wool is matte, nylon sheens, leather creases). A fabric library is made once (about 10 fabrics, 1.5 h each) and every garment uses it. - Stitching and seams: real seam lines, topstitching, hems, buttons, zips, pocket edges, drawn into the garment. - Wear and folds: creases where cloth folds (elbows, knees, the waist), fading on denim, pilling on knits, scuffs on work gear, a little dirt on hi-vis and coveralls; folds sculpted so the cloth hangs like cloth. - No real brands or logos, ever. Printed tees carry a specific graphic of our own (a sports car, a palm beach, a band-style design, a mountain, a slogan we write), one real design per print, not a vague blob.

This bar adds about half again to each garment: 2.5-3 h instead of 1.5-2 h. The tables above are the cheaper figures; the launch total below uses the real ones.

G. The whole wardrobe at launch (at the quality bar of H)

	Hours
The fabric library, made once (H)	15
Uniforms (A), at the quality bar	80
Passengers (B), at the quality bar	55
Accessories and shoes (B2)	18
50 prints and colours (C), each a real design	15
Your wardrobe (D)	4
Fit testing (E)	8
Dressing passes, unattended, in agreed pieces	7
Total	about 205 h: at 3 h a day, about 68 days

Order: the fabric library first (everything needs it), then uniforms (crew are needed in the game before passengers' variety matters), then the everyday passengers, then warm and cold, teenagers, the rest. Every finished garment is usable the day it is made, so the game gets better-dressed week by week; nothing waits for the end.
